Surgeon, Modena, Italy*

SKIN REDENSIFICATION WITH REDENSITY [I] AND TEOSYAL® RHA 1 IS DEPENDENT OF MORPHOTYPES. AN ITALIAN PERSPECTIVE

Until recently, the correction of facial blemishes was limited to an action of filling, with no regard for anything else. Many doctors were unsatisfied by this approach, and therefore it appeared necessary to rethink new methods, more complete and synergistic strategies, in order to meet the needs both of doctors and patients.

The Dynamic Redensification is a recent method to deal with the signs of time. This is a combined anti-ageing strategy, in which the "dynamic" filler TEOSYAL® RHA 1, a hyaluronic acid structured to be particularly versatile and easy to handle, is combined with the active ingredients and nutrients of the bio-revitalizing TEOSYAL® REDENSITY [I], which contains, in addition to the non-cross-linked hyaluronic acid, alpha-lipoic acid, N-acetyl-L-cysteine, glutathione and other essential elements to protect the skin and stimulate tissue regeneration. The synergy between the Dermo-Restructuring Complex of REDENSITY [I] and the new morphology of TEOSYAL® RHA 1 makes possible the creation of a large "reserve of hydration" and allows the skin to assume a renewed texture, a greater elasticity, a new brightness.

This way, we achieve significant results on at least three fronts:
1- reversal of oxidative processes and protection from external factors (photoageing strategy);

2- redensification and dermal-epidermal regeneration (chronoageing strategy);
3- line and wrinkle correction (reshaping).
With the Dynamic Redensification Protocol each correction is made to give health to the skin and an aesthetic improvement: biological improvement and aesthetic improvement thus go hand-in-hand.

And there's more. The REDENSITY [I]/TEOSYAL® RHA 1 treatment protocol is flexible – almost customizable, I would say – because it is modulated in relation to the different morphotypes. This possibility, which gives great value to the professionalism of the doctor and allows to achieve the highest patient satisfaction, makes me speak of a strategy for the future!

We know that skin ageing changes, generally, in relation to age and can be considered as the sum of a share of genetic ageing (chronoageing) and of another part related, instead, to the habits and the external stresses to which everyone's skin is subjected day after day (photoageing). However, chronoageing and photoageing aren't always inseparable with age. As a general principle, in my daily work, I tend to separate patients into two broad categories:
1- men and pre-menopausal women;
2- women after menopause.
The second major distinction which should be adopted will depend upon morphotypes. Very young people with initial ageing (which is likely photoageing, 18-25 years) can be treated with

bio-stimulation, through REDENSITY [I], or even just encouraging the use at home of appropriate cosmeceuticals for a proper prevention.

But if we go up to grade 1 (mild to moderate photoageing, 25-45 years old) or to grades 2 and 3 (advanced photoageing, 45-60 years old / severe photoageing, over 60 years old), a concerted action of wrinkle filling and crosslinked support will be required. Here is a first example of combined use of REDENSITY [I] and TEOSYAL® RHA 1, which clarifies the value of the Dynamic Redensification Protocol.

Furthermore the concept of "combined" and "customized" is not limited to this phase. Keeping in mind the patient I have in front of me, I evaluate in each case the opportunity, if not the necessity, of having recourse to other treatments, such as peeling or microdermabrasion which, in synergy with the dynamic redensification, allow to reach excellent results.

The skin redensification protocol is supported and completed by a daily beauty routine that pays close attention not only to the quality of cosmeceutical products but also to the quality of our lifestyle.

TEOSYAL® PureSense RHA 1 to 4, TEOSYAL® PureSense REDENSITY [I] are medical devices, class III, and are regulated health products bearing the CE marking (CE0086) under this regulation. TEOSYAL® PureSense REDENSITY [I] is a mesotherapy product. TEOSYAL® PEN is a motorized and cordless device for hyaluronic acid injections in order to correct wrinkles and depressions. Manufactured by Juvaplus SA. TEOSYAL® PEN (class IIa), is a regulated health product which bears, under this regulation, the CE mark (CE0434). For more information about those products, please consult your doctor and product instructions for use. Technical data and cases presented reflect the personal experience of the physician. TEOXANE Laboratories could not be held responsible for the effects of these fillers when used outside CE marking.
